

EXCLUSIVE MEASUREMENT MODE

Let us tell you why you need it

► Why does veterinary or owner need the Cycle Mode?

- When you are focused on surgery.
- When the pets are recovering after surgery.
- When a pet is hospitalized for various diseases.
- When a pet has a white robe fear could cause high blood pressure, the veterinarian needs to leave the scene.

You will need someone to automatically tell you the pet's vital signs condition. Even need 24/7 monitoring.

Measurement Mode – Cycle

The cycle interval can be set according to the user's needs (1 minute to 2 hours). pettrust will automatically perform periodic blood pressure measurement according to the set time. Users no longer need to press any button or make extra settings.

ACVIM

5 Times

7 Times

- The literature published by *ACVIM* also states: In order to obtain the most accurate blood pressure values, it is necessary to measure at least 5 to 7 times and calculate the mean value.

S. Brown, C. Atkins, R. Bagley, A. Carr, L. Cowgill, M. Davidson, B. Egner, J. Elliott, R. Henik, M. Labato, M. Littman, D. Polzin, L. Ross, P. Snyder, and R. Stepien(2007). *Guidelines for the Identification, Evaluation, and Management of Systemic Hypertension in Dogs and Cats. ACVIM Consensus Statement.*

- So, based on the above factors, you definitely want someone to help you automatically measure multiple blood pressure values to make your work easier.

pettrust's Cycle Mode is your best choice!!!!
